## DETAILED ACTION

### *Specification*

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet **within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited.** The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Comments: Abstract exceeds 150 words.

### *Drawings*

2. The drawings are objected to because **the label in Block 200 in FIG. 2A should be changed to Noise Eliminator.** Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must

Art Unit: 2611

be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Objections***

3. Claim 11 is objected to because of the following informalities: in line 4, "an bias-reduced received signal" should be changed to "a bias-reduced received signal". Appropriate correction is required.

### ***Allowable Subject Matter***

4. Claims 1-9 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 1, claim is allowable over prior art record because the cited references cannot teach or suggest a digital DC bias estimation apparatus for

Art Unit: 2611

estimating a DC bias of a received signal obtained from sampling a received packet, wherein the digital DC bias estimation apparatus comprises elements as set forth in the application claim.

5. Claims 10-11 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 10, claim is allowable over prior art record because the cited references cannot teach or suggest a digital DC bias estimation method for estimating a DC bias of a received signal obtained from sampling a received packet wherein the digital DC bias estimation method comprises the steps as set forth in the application claim.

### ***Conclusion***

6. This application is in condition for allowance except for the following formal matters:

The abstract exceeds 150 words and claim 11 has some informalities need to be corrected .

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lindoff et al. U.S. Patent 6,370,205 B1 discloses "Method And Apparatus For Performing DC-Offset Compensation In A Radio Receiver".

Gummadi et al. U.S. Patent 7,136,436 B2 discloses "Boundary Detection Using Multiple Correlations".
